Twiki Power Advanced Container Tracker

The digital assistant for every freight forwarder

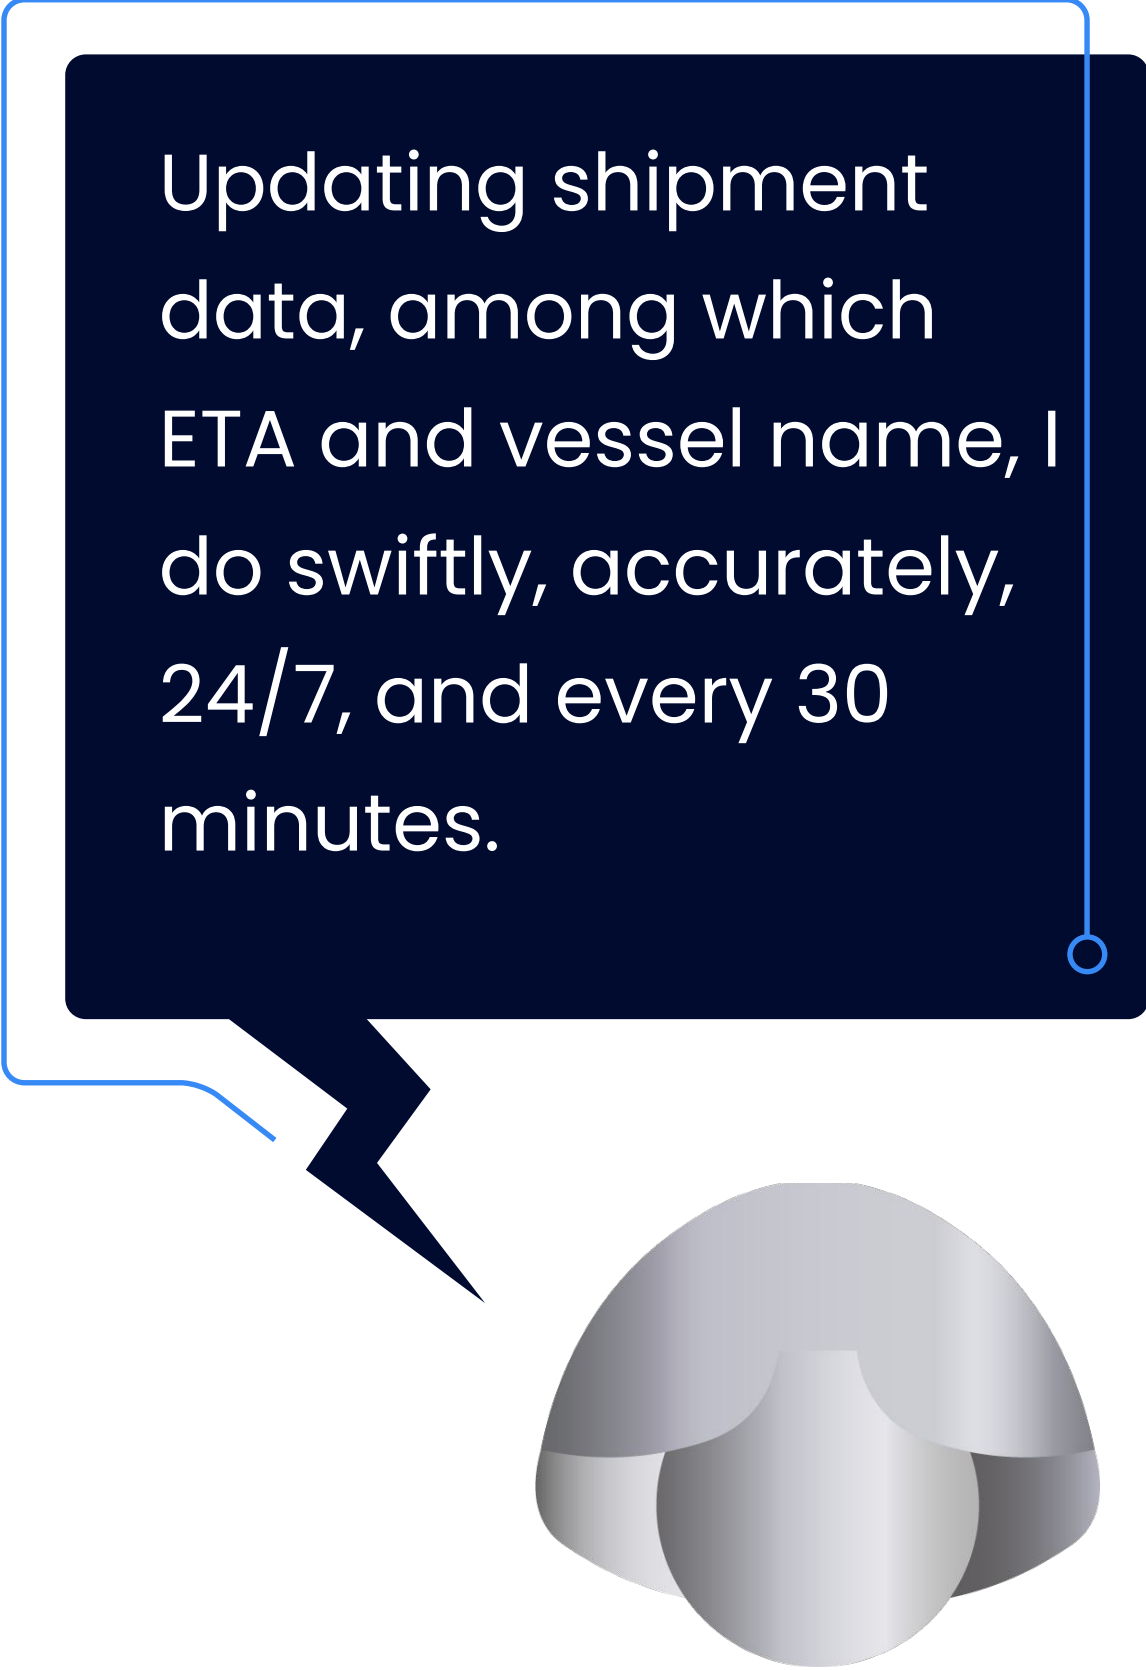

Trends in international container transport, shortages on the labor market and customer information demand are increasingly putting your operation under pressure.

Your customers expect to be updated most accurately in a timely manner. To meet this expectation your forwarders are working overtime being creative to get the maximum productivity out of the team.

The many delays lead to additional administrative actions and communication, such as the continuous adjustments of ETA, ETD, full gate out, discharge date and other relevant visibility milestones* together with all the required actions in your freight management system.

Use the MBL or booking number to find out the vessel name currently carrying the relevant container, checking and adjusting the corresponding milestone timestamps via the carrier and terminal websites in your own freight management system. Although this process is reliable, it is very labor-intensive. This is common sense for you, after all, it's your business. Last but not least it causes extra communication and coordination with your partners (trucking companies and Customs agents), and, most importantly, your customers.

* please contact us for a complete list of visibility milestones Twiki Power Advanced Container Tracker has to offer.

Updating shipment data, among which ETA and vessel name, I do swiftly, accurately, 24/7, and every 30 minutes.

There are several providers who claim to be able to reliably support this process. With the implementation of API integrations with carriers, AIS (GPS ship position) and predictions based statistical models. The challenge, however, is that the imported data is partially incomplete and/or derived based on probability theory and historical data.

Without saying, your operations department and customers expect more, namely 100% reliability.

It's good to know that Twiki Power Advanced Container Tracker ensures an excellent process with 100% accurate data. As a result, your forwarders can plan even better and inform your customers even better. Your customers then know when exactly to expect their shipments. Additionally, the customer (importer) and supplier can better fulfill their commercial agreements as the Actual Time of Departure often plays a crucial role in payment terms.

Twiki Power Advanced Container Tracker is a so-called software robot. The digital assistant of your forwarders who carries out the checks and updates independently, 24/7 every 30 minutes. The specific actions that Twiki delivers to your Freight Management-/ERP system:

- Processing all the milestones including vessel changes (transshipments);
- Providing full ocean-freight visibility of all relevant milestones, including empty pickup, full gate in, ETD, ATD, ETA, ATD, discharge date, full gate out, empty depot return;
- Sending notifications to your operations department;
- Optional: sending notifications to your partners and customers.

In addition, frustration among your customers about incorrect ETA and vessel information - belong to the past. After all, a satisfied customer starts with a perfectly informed customer.

Do you want to know how Twiki Power Advanced Container Tracker can improve your operations and meet your customer's increasing information demands?

Feel free to call, send us an e-mail or a WhatsApp message.

Meet our Team

Team Twiki Solutions

My passion is to help companies improve and optimize their business processes.

I do this by analyzing business processes and lifting them to the best practice.

Ramon Spaan

Co-Owner | Director of Operations

Over the past 20 years I have supported many organizations to improve and automate their administrative processes.

Although no project is the same, human work continues to change. And that's exactly what I think is cool, critically reviewing the process together with the customer and implementing the identified improvements.

Sven-Olav Montijn

Co-Owner | Director of Sales & marketing

My keen focus on details, coupled with a strong drive to accomplish tasks, provides me with the equilibrium necessary to propel me forward.

Iason Skylitsis

Junior Developer

Meet our Team

Team Twiki Solutions

I'm a passionate developer who thrives on challenges and I like turning ideas into functional applications. I have a passion for tech and enjoy working with like minded people.

Roel de Jeu
Junior Developer

Driven by a passion for computer science and the thrill of solving challenges, I'm diving deep into the digital world at Twiki Solutions. I'm dedicated to learning, and contributing, always aiming for excellence in every project.

Dan Plamadeala
Junior Developer

As a passionate developer, I am driven by the desire to tackle real-world challenges, leveraging innovative solutions to make a positive impact on our world. My commitment to stay at the forefront of cutting-edge techniques fuels my continuous pursuit of creative problem-solving.

Akis Lionis
Junior Developer

Meet our Team

Team Twiki Solutions

I am passionate about tech and have a background in mathematics and data science. My diverse foundation allows me to find unique solutions to complex problems, something I enjoy sharing within a team of dedicated people.

Ramon de Boer
Junior Developer

As a front-end developer, my motivation is to deliver pixel-perfect user interfaces using best practices and the latest technologies. I am passionate about creating seamless and visually appealing web experiences that meet and exceed user expectations.

Dimitris Tolios
